Place your black and white artwork on the sides that you wish to engrave.
Allow your art to overlap the edges if you want the art going to the edge.

Artwork is difficult to align perfectly on the box surfaces, so please don't rely
on features of your art lining up with the knob or the cord hole. With extra
charge and time we can try a special alignment, placing the art within a couple
millimeters.

Save as psd or in a format that allows you to edit the layers in the future.

Give us a .bmp file (Windows type, defaults for other settings) Don't crop from
original size. Turn off artboards layer before saving. You may also give us the
.psd to allow us to adjust as we need for lasering.
