Placing your artwork onto this template:
Place your black and white artwork on the sides that you wish to engrave. Allow your art to overlap the edges if you want the art going to the edge. Engraving location isn't exact, so if you need a feature of the artwork to line up with a feature of the box perfectly, let us know and we can evaluate.

Save locally as a psd or in a format that allows you to re-edit the layers if needed in the future.

Save a high quality file to submit to us. Recommended .png or .bmp file (Windows type, defaults for other settings) Don't crop from original size. Turn off artboards layer before saving. You may also give us the .psd to allow us to adjust as we need for lasering.
